# The Dahlstrom Products

TO the fireproofing that protects a building's exterior you must add the fireproofing that protects life and contents---if you would have an **absolutely** fireproof structure. The Dahlstrom Products include the "Dahlstrom Patent" Sheet Metal Doors, Partitions, Trim, etc., as installed in the world's most prominent Office Buildings, Apartments, Residences, Hospitals, Museums, etc. Our book, "Buildings As They Should Be," covers this part of the Dahlstrom Products.

## Mouldings

¶ Our Mouldings are cold drawn under a process originated and perfected by ourselves, in high-grade Steel, Brass and Bronze, perfectly true to designs, with sharp definite outlines. They are supplied not only in connection with our doors, but are used by Iron Contractors, Stair Builders, Manufacturers of Metal Furniture and Specialty work of all kinds. Dies for special shapes made up at reasonable cost. Catalogue and price sheet covering more than 800 shapes can be had upon application.

**¶ Briefly, our business is the working of sheet metals of all kinds. Our unexcelled facilities are placed at your disposal. Literature upon request.**

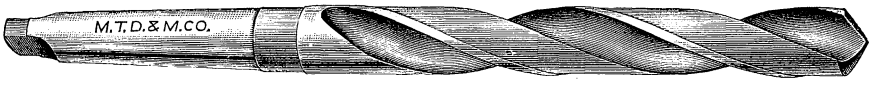
# "PARAGON FLATWIST" HIGH SPEED DRILLS



are forged from bars of best quality high speed steel. The "Paragon" flat-taper shank is one piece with the drill—forged without weld or joint from the original bar. These efficient drills are accurately centered and firmly driven by simple inexpensive "Paragon" Collets. Their use in High-Speed Drilling means ***Economy.***

Write for Folder No. 311—it gives description and prices of this efficient drill.

# "MORSE" DRILLS

are made for all kinds of work that a twist drill can be used for, in many styles, and from .0135 of an inch diameter to 6 inches. Either of carbon or high speed steel, and the best that can be made.

Other lines of our make, Reamers, Cutters, Chucks, Taps, Dies, etc., etc., are equally as good as "MORSE" DRILLS.

G-E
Motors Effect Many Operating Economies

Their use results in lower cost for power, a saving in floor space, more efficient work from employees and enables machinery to be run at just the right speed.

The majority of electrically equipped textile mills, machine shops, steel plants, mines, paper mills, grain elevators, pumping plants, docks, etc., are using G-E motors.

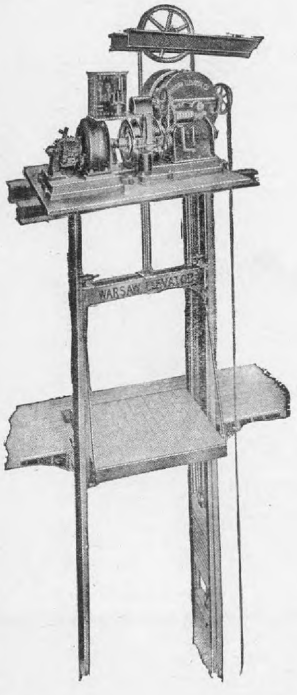
# OTIS ELEVATORS

AN Elevator will relieve conjested floors in any manufacturing plant; make available space for additional machines, and double the capacity of the plant and its value.



WE can furnish an Otis Hand-Power Elevator, having a capacity of 1500 pounds, for $75.00, or for $300.00 furnish an Otis Power Elevator to be connected to your present shafting.

WHY not consider this small investment, which would not only relieve your manufacturing floor, but double its capacity, avoid unnecessary handling of material and give full value to all your upper floors.

WE will gladly furnish any information desired regarding Elevator Equipment for any character of service. Department "H"

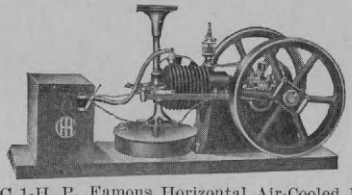
# I H C GASOLINE ENGINES



I H C 2-H. P. Vertical Engine

I H C 6-H. P. Semi-Portable Engine

I H C 2-H. P. Hopper-Cooled Engine

I H C 1-H. P. Famous Horizontal Air-Cooled Engine

## Standard of Quality for Every Power Need

### I H C Victor Stationary Engines

These engines are designed for general power work on the farm, in factories, grain elevators, grist mills, feed mills, hoisting plants, pumping stations, and for irrigating, shop use, etc. They are especially desirable where insurance restrictions will not permit gasoline to be kept in the building, as the fuel tank may be placed outside at a distance from the engine.

Vertical type made in 2 and 3-horse power sizes.

Horizontal type made in 4, 6, 8, 10, 12, 15, 20, and 25-horse power sizes.

### I H C Famous Semi-Portable Engines

The I H C famous engine on skids is designed to meet the ordinary needs of farm work. The engine is the result of years of conscientious and extensive experimenting. The simple design and thorough construction and the economical method of supplying fuel to the cylinder insures an efficient power that will last for many years. It is equipped with substantial skids on which the engine, cooling tower, and gasoline tank and battery box are securely mounted.

Vertical type, 2 and 3-horse power.

Horizontal, 4, 6, and 8-horse power.

### I H C Hopper Cooled Engines

I H C hopper-cooled engines have many advantages which should be considered by the prospective engine purchaser. The water jacket on the cylinder is enlarged to form a small, box-shaped tank. Only a small amount of water is required to fill this tank and cool the engine cylinder. This does away with a large cooling tank and makes the outfit more compact.

This outfit is especially desirable in cold weather as the water jacket is easily drained.

They are made in stationary, semi-portable, and portable types; vertical—2 and 3-horse power; horizontal—1, 2½, 4, 6, and 8-horse power.

### I H C Air Cooled Engines

I H C air-cooled engines are especially adapted for small jobs around the farm, and for contractors, railroad construction, etc. On small engines, this system of cooling is very satisfactory, and as no cooling water is required, there is never any danger of it freezing. These outfits are much lighter than the water-cooled engines, and are very easy to move from place to place. Jump spark ignition is used, and the batteries, coil, gasoline tank, and engine are all mounted on substantial wooden skids, making the outfit self-contained.

1-horse power, horizontal; 2 and 3-horse power, vertical.

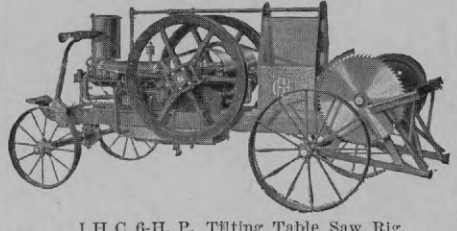
# I H C GASOLINE ENGINES



I H C 8-H. P. Portable Tank-Cooled Engine

I H C 25-H. P. Gasoline Tractor

I H C 35-H. P. Vertical Engine.

I H C 6-H. P. Tilting Table Saw Rig

## Standard of Quality for Every Power Need

### I H C Portable Engines

These engines have a wide range of adaptability. They can be moved easily from place to place and furnish the most efficient and economical power for operating farm machines, pumps, saws, etc. Contractors find them unequalled for well drilling, stone crushing, pumping, operating temporary electric light plants, and the like.

The trucks are light but exceptionally strong, and will stand the wear and tear of the roughest roads.

Tank-cooled: Made in 4, 6, 8, 10, 12, 15, 20, and 25-horse power sizes.

Hopper-cooled: Made in 4, 6, 8-horse power sizes.

### I H C Gasoline Tractors

An I H C gasoline tractor will do plowing, seeding, harrowing, hauling, and threshing at a small part of the cost of horse power. Later in the season it can be used for sawing wood, or any belt work that can be done with a portable engine with the added advantage that it moves itself from place to place.

For plowing, grading, hauling, operating concrete mixers, stone crushers, etc., on construction work, I H C gasoline tractors are unequalled.

Many towns are now using I H C gasoline tractors for road grading, hauling, operating stone crushers, etc.

Sizes 12, 15, 20, 25, and 45-horse power.

### I H C Two-Cylinder Vertical Engines

I H C two-cylinder vertical gas and gasoline engines have many advantages over other forms of power for machine shops, factories, electric light plants, water works, etc.

Low cost of fuel per horse power generated.

Low cost of operation and maintenance.

Facility for quick starting.

Economy of space. No standby losses.

The close regulation, economy, reliability, and durability of I H C engines has earned for them a place in the world unapproached by any other engines.

Sizes, 25 and 35-horse power.

### I H C Combination Outfits

I H C engines are made in many desirable combination outfits as follows:

Portable sawing outfits, 3, 4, 6, 8, and 10-horse power.

Spraying outfits, 1 and 2-horse power.

I H C 2-horse power pumping engine.

I H C 3, 4, and 6-horse power hay baler.

I H C 4 and 6-horse power self-contained thresher.

See the nearest I H C local dealer, or write direct for catalogues.

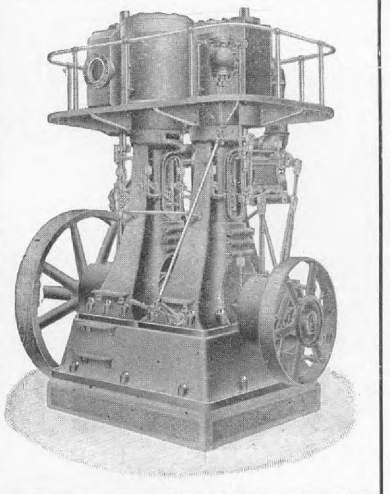
# BUCKEYE ENGINES



Results obtained from advertising in Hendricks' Register have justified us in taking two pages to tell about BUCKEYE ENGINES---Steam and Gas.

Sixty-three years ago the Buckeye Engine Co. was organized, with an aim to build the best steam engine possible. Thus the BUCKEYE ENGINE of today is the product of these years of practical engine building---the present construction is the result of experience and careful thought.

The governor was the first successful shaft regulator ever produced and with the late improvements is today the most successful regulator of its type.

A perfectly balanced cylinderical valve, with which a riding cut-off valve is used, is a feature contained only by the BUCKEYE ENGINE. These valves, having uniform travel and sufficient seating area, are constructed to overcome all tendency to uneven wear.

The BUCKEYE method is to eliminate all complicated gearing, using only that which is essential. This has produced the simplest high-class engine on the market. Skilled workmen and a system of rigid shop inspection insures the high standard which has made the BUCKEYE reputation.

**When you need power for *any purpose* write us stating your requirements. Let us recommend the style of engine. It will prove a paying investment.**

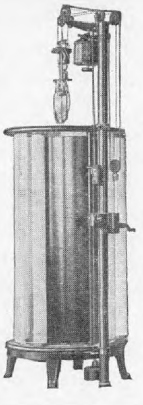
# BUCKEYE GAS ENGINES

Meet all requirements of customers desiring an efficient prime mover, low fuel and labor cost with moderate expense of maintenance. It is a high-class Gas Engine of American design, having the complications of foreign types eliminated.

Simplicity of construction and accessibility of parts for assembling and dismantling appeal to the practical engineer.

The regulation is equal to that of modern steam engines, and sufficiently close to meet the most exacting conditions.



A direct governor drive is an exclusive feature. The governor is driven by the drag shaft, eliminating troubles due to torsonial disturbances which exist in governors driven from the lay shaft.

The BUCKEYE lay shaft drive is of the simplest construction, using but two gears. The swivel cross-head shoes as used on this engine overcome the tendency of the cross-head to bear on one end and cause heating of both shoes and slides.

The ignition system has been developed to the point of the greatest reliability. Current for the electro-magnetic plugs is furnished by a generator, supplimented by a storage battery which floats on the line.

BUCKEYE GAS ENGINES are built both single and double acting, operating on natural, illuminating or producer gas. Horse powers from 60 up.

## *THE SUN THAT NEVER SETS*

**The Buckeye Electric Blue Printing Machine** is of the highest efficiency and lowest price.

Exposure is controlled by a fly-ball friction governor; the curtain arrangement insures perfect contact. One lamp used made especially for blue printing services consumes very little current. A boy or girl can operate it at low cost. The expense of maintenance is slight, owing to durable and fool-proof construction.

# "AMERVAN" FERRO VANADIUM

## "The Master Alloy"

Vanadium Steel made from the right kind of Ferro Vanadium and submitted to the right kind of heat treatment is the highest type of steel known to the metallurgical world. There is absolutely nothing beyond it for strength, toughness, durability, freedom from fatigue and crystallization, and general all round workability.

The most important factor in making good Vanadium Steel is the quality of the Ferro Vanadium by which the Vanadium is introduced.

The determination of the proper chemical composition of Ferro Vanadium is a vital matter, and requires expert knowledge. The manufacture of the right Ferro Vanadium requires good ores, infinite precaution, factory methods as precise and accurate as laboratory methods, and unceasing analysis—**to make sure.**

The American Vanadium Company commercialized Ferro Vanadium. It controls rich and extensive mines; has studied Vanadium from every standpoint and operates the largest and most complete factory in the world for the production of Vanadium Alloys.

We guarantee our Vanadium Alloys to be right, and you can insure the quality of your Vanadium Steel purchases only by insisting that your steel maker employ "**Amervan**"—the tried and proved and proper

# "ACME" Oil Filter

We sell on 30 days' trial.

**READ THIS:** "Alton, Ill., October 1, 1909.
Walter L. Flower Company, St. Louis, Mo.
Gentlemen:—We have used one of your ACME Oil Filters for about eighteen months. Prior to its adoption we were using eleven barrels of engine oil per year. Now our consumption is only four. This result is self-explanatory. Yours very truly, BEALL BROS.
By A. Dodson, Engineer."

Are you open to conviction? Yes; then send for our booklet and we will prove that we can make an ACME FILTER save you one barrel of oil out of three.

# EXTINGUISHER

This extinguisher, which is now being universally used in private houses, consists of a finished copper jacketed cylinder containing a special chemical solution. On inverting this extinguisher a working pressure of 150 pounds is exerted upon said solution and giving upon a moment's notice an instantaneous and effective stream.

This efficiency of this extinguisher is to our many years of experience in this line enabling us as it does to find out exactly what is required along these lines. This is also attested by the many thousands of these which are now in use and have never failed to give the proper results at the critical moment.

# THE BEST FLOOR DRAIN ON EARTH

THE BLAKE JUNIOR

NO BACK FLOOR DRAIN

This is a broad statement to make, but, we have no hesitation in doing so, and, if you will examine the cut, it will convince you of our claim.

Has a sand arrester to prevent mud and sand from washing in trap. Easy to clean—cover not bolted. Clean-out plug for access to sewer. It has spun copper ball and rubber seat, which makes it a perfect back-water floor drain. Made in 2-inch and 4-inch sizes.

2-inch measures 10 by 10 inches and 9 inches deep. 2-inch weighs 25 pounds.

4-inch measures 17 by 17 inches and 16 inches deep. 4-inch weighs 85 pounds.

**We manufacture Clean-outs, Iron, Lead and Brass Traps fitted with Blake's famous "So-easy-to-remove-clean-out cover and soil pipe fittings."**

**NEW ERA SELF-LUBRICATING METALLIC ENGINE PACKING**

**This Improved Packing Material** consists of a compound mass of Mineral Lubricants: Hence, it provides perfect lubrication under all conditions of service, requiring no lubrication whatever, except that contained within its own substance. It never becomes charred or otherwise unfit for service; and it will not lock or score the rods, plungers or shafts on which it is used.

It is an ideal packing for the Piston-rods and Valve-stems of Engines: Also for Power Pumps, Steam Pumps, Ammonia Pumps, Compressors, Hand Valves, etc.

It is equally dependable on reciprocating, oscillating, or revolving rods or shafts; and will give perfect satisfaction in steam, water, oil, gas or ammonia solution.

It saves the engine, saves money and saves labor.

It will last several years instead of several months; and it requires practically no attention after being installed. **Large Piston-Rod Packing a Specialty.**

**METALLIC PHOSPHORO**
**(Phosphor Tin Improved)**

**Prevents** excessive shrinkage, porous formation, blow-holes and cold-shuts.

**Increases** density, elasticity, strength and wearing quality.

An Ideal Flux and Tempering Agent for castings which require tempering; such as high grade bearings of Bronze, Brass, Babbitt, etc.

**META-LOYED-FLUX**

The only Metallic Flux or Deoxidizing Agent That Will Not Temper the Alloys in Which it is Used.

Prevents excessive shrinkage, porous formation, blow-holes and cold-shuts.

Increases fluidity, density and ductility.

If you desire to produce pliable, ductile castings, use Meta-loyed-flux.

W.S. ROCKWELL CO. ESTABLISHED 1888 CHARTERED 1908 NEW YORK

Our experience in furnace design and construction covers a period of over twenty years, and Rockwell Furnaces are in thousands of factories in this country; in the mints, the arsenals, the navy yards, in this and other countries. We also manufacture a full line of appliances for the handling and burning of gas and oil.

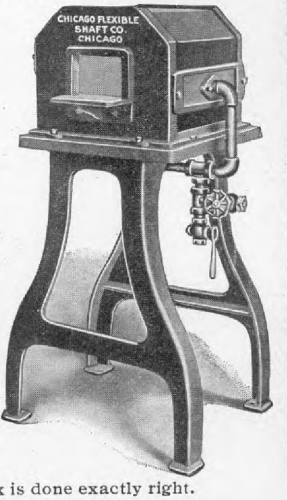
# For the Heat Treatment of Metals in the most modern way use a Stewart Furnace

## Stewart Combination Furnace

A combined muffle, forge and crucible furnace on one base. Ten to twelve minutes produces a good hardening heat in the muffle. One minute from the time of starting the furnace brings a piece one inch round to a good hardening heat in the forge section. Thirty-five minutes will heat a crucible of lead to a cherry red. No chimney is required and no dust nor dirt accompanies its use. The range of uses to which this furnace may be put makes it practically indispensable.

## Stewart No. 1 Oven Furnace

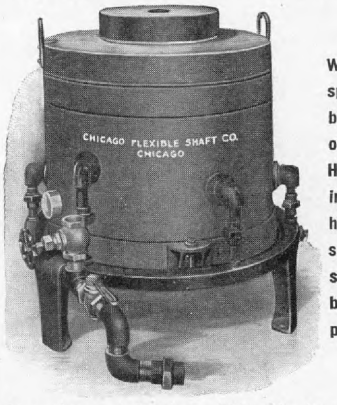
Suitable for heating an infinite variety of work, such as dies, milling cutters, tools of every kind, cutlery, springs, reamers, etc. This furnace makes for a maximum of efficiency in all pieces heated in it. By its use the percentage of loss and inferior work is reduced to practically nothing. The increased uniformity of results and low cost of operation make this furnace a most profitable purchase. This furnace may also be used as a muffle furnace.



***This is the world's most modern and varied line of gas or oil operated forges, oven furnaces, crucible furnaces, brass melting furnaces, case hardening furnaces, high speed steel furnaces, plate annealers, rivet heaters, brazing tables, soldering iron heaters, etc.***

# Sixty Styles and Sizes

***Write for our big catalogue.***



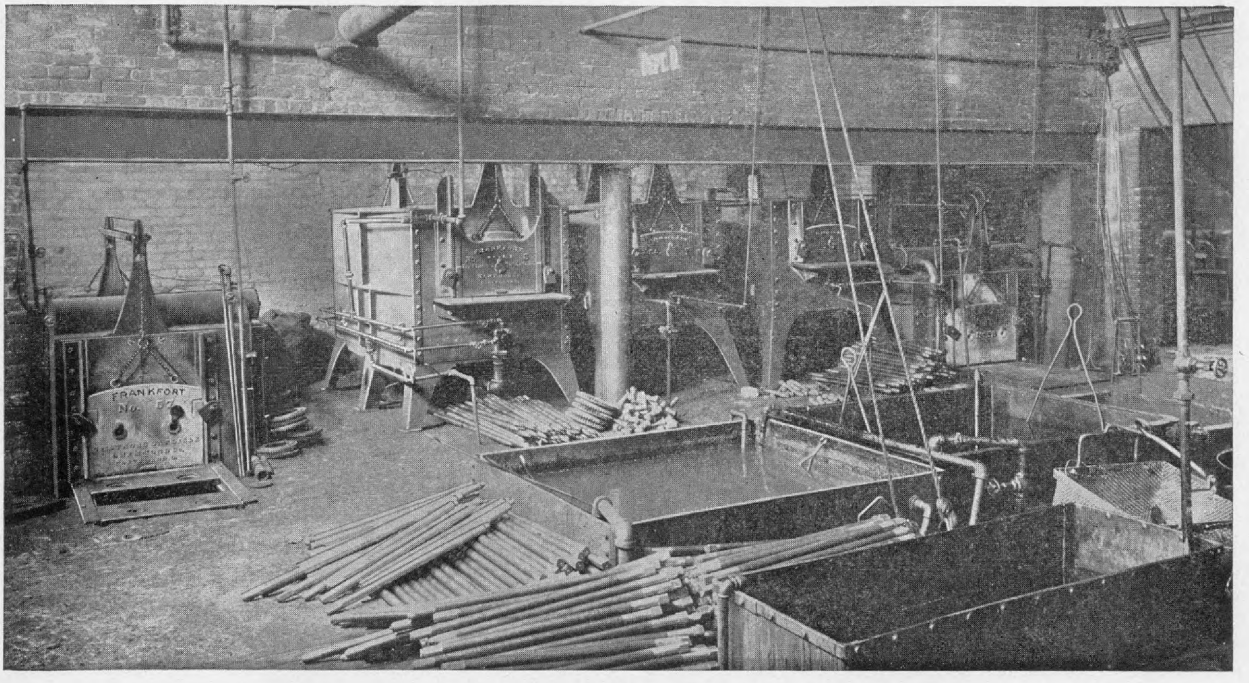
***It will show you many avenues to economy and better results in the heat treatment of metals and pieces of all kinds.***

## Stewart No. 0 Forge

A very convenient and economical furnace for use in heating the ends of rods or other long pieces for welding, etc. Does the work rapidly and under perfect regulation of heat. Like our other furnaces, it may be procured fitted for burning gas, crude oil or kerosene. There is no waste of fuel, the heat is all put to use and the work is done exactly right.

## The Most Perfect Method Known for Hardening High Speed Tools

**Write for special booklet on the Hardening of high speed steels by this process**



## The Stewart Barium Chloride Furnaces

Designed especially for this use. Special analysis fire clay linings; no unnecessary piping or useless apparatus. Perfect combustion, absolute control of heat. It means no spoiled pieces, more work and finer results from every high speed steel tool you make. This perfect hardening means double the life for most of your high speed steel tools

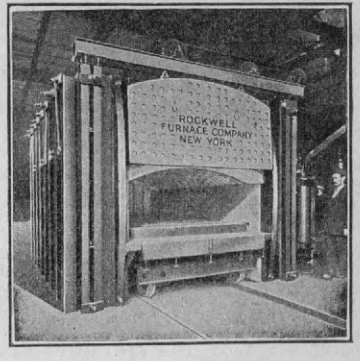
# Do You Know the Comparative Values of Various Fuels?
# Have You the Most Economical Furnace Equipment?

The question of fuel is one which to-day demands careful attention, and can only be determined after careful consideration of the nature of the work, base cost of fuel and the money investment. We are prepared to furnish figures showing relative economy of all fuels, taking into consideration direct firing, preheating and regeneration.
This table of comparative fuel values is copied from page 3 of our Catalog "F-21."



Gas Fired Forge Furnace

| KIND OF GAS | Heat units in 1 cu. ft. | Cu. ft. to equal 1 gal. of oil |
|---|---|---|
| Natural Gas | 1000 | 140 |
| Coal Gas, 20 C. P. | 675 | 208 |
| Carburetted Water Gas | 646 | 216 |
| Gasoline Gas, 20 C. P. | 690 | 202 |
| Water Gas from Bituminous Coal | 377 | 376 |
| Water Gas from Anthracite Coal | 313 | 447 |
| Producer Gas | 150 / 90 | 935 / 1555 |

1 lb. average oil.....equals 19,000 B. T. U.

**All embodied in our "Always Reliable" B Kerosene Furnace and No. 35 Kerosene Torch. Economical, because 2 quarts of kerosene will burn as long and do as much work as 4 quarts of gasoline, a saving of one-half; also does not require any insurance permit. Safe, because kerosene can be carried with much less danger of being ignited and causing damage by fire. Durable, because the reservoir (or body) is made entirely of heavy metal, and the burner of the best composition, and is so constructed that it can be easily taken apart and cleaned of any carbon deposit. Especially adapted to the use of Telephone and Telegraph Co's, Plumbers, Tinsmiths, and the trade generally. Ask for our Catalog. Manufactured by**

# Ideal Interurban Railway Operation

is ensured by the installation of a

# 1200 Volt Direct Current System

Several years' successful operation by the Indianapolis & Louisville Traction Co., Central California Traction Co., Washington, Baltimore and Annapolis Electric Railway Co., Aroostock Valley Railway Co., Southern Cambria Railway Co., Shore Line Electric Railway Co., Milwaukee Electric Railway & Light Co., has demonstrated the following advantages:

**Reduced initial cost of installation.**

**Lower fixed charges.**

**Saving in operating cost and fixed charges.**

**Reliability as great as the 600 volt D. C. system.**

**Successful operation of cars over connecting 600 volt city lines.**

We are prepared to furnish complete Electrical Apparatus and Equipment for Railways.

TWO OF OUR 75-TON QUARRY DERRICKS

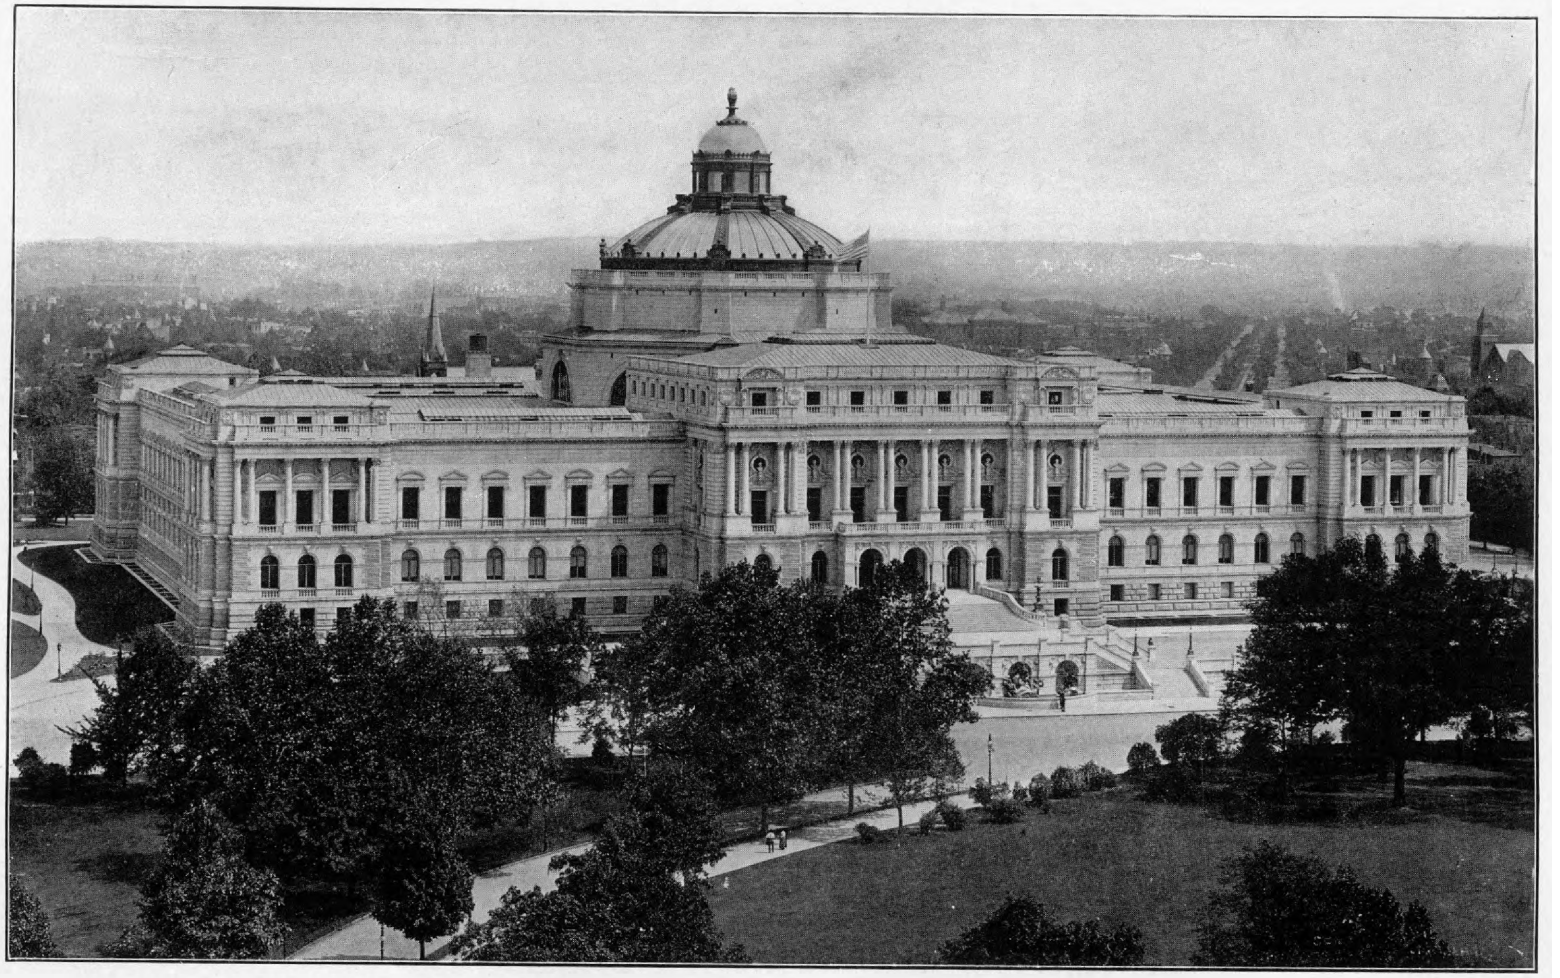
# GRANITE

**RED GREEN GRAY**

**For large buildings, bridge work, wharves, piers, dry docks, and heavy masonry of every description**

We are one of the largest and oldest concerns in our line in the country, being

**ORGANIZED IN 1864**



We are just completing contracts for furnishing cut stone for the United States Dry Docks at Brooklyn, N. Y. and Norfolk, Va., and also shipping stone with which to build the immense piers and walls for the Commonwealth of Massachusetts, on which are to be erected the Fish Houses in the City of Boston. This is one of the largest contracts of its kind ever undertaken in heavy masonry.

# GUARANTEED

## Boiler Ratings

## The Average Catalog

Says: "We **ONLY** guarantee our boilers against defective castings." **YOU** must guarantee the boiler to your customer. **Why Do You Assume** a responsibility which the manufacturer **REFUSES** to take?

## The Gorton Side Feed Boiler

**is Guaranteed. If The Boiler** does not come up to the guarantee **WE MAKE GOOD.** It is our loss—not yours.

The Gorton Side Feed Boiler is made of steel plate of fifty thousand pounds tensile strength—the same as a power boiler—thus insuring ***safety*** and ***durability***, a very important item to be considered.
